

## Overview

The University of Alabama at Birmingham (UAB)-University of California at San Diego (UCSD) O'Brien Center for Acute Kidney Injury (AKI) Research is an interdisciplinary center of excellence in AKI-related research, and beginning in 2023, is a member of the O'Brien Kidney Consortium as one of the seven U54 National Resource Centers (NRCs).

The overall theme of this Center is to focus on pre-clinical, translational, and clinical research in AKI. This Center shares resources, methods, and innovations with the Consortium under the guidance of the Steering Committee, National Coordinating Center (NCC), and NIDDK to attract new scientific expertise into the field.

**AIMS:**

- Integrate our two institution-based O'Brien Center into the O'Brien Kidney Consortium
- Foster meaningful interactions among investigators in the O'Brien Kidney Consortium.
- Share the Center's intellectual resources and infrastructure
- Utilize the Resource Development Core to respond to the evolving needs of investigators
- Develop tomorrow's thought leaders through the Summer Student Training Program (SSTP).

Program Director:  
Associate Directors:

Anupam Agarwal, MD, University of Alabama at Birmingham  
Paul W. Sanders, MD, University of Alabama at Birmingham  
Joachim H. Ix, MD, University of California, San Diego

## Resource Development Core

Co-Directors: Javier Neyra, MD, UAB ([jneyra@uab.edu](mailto:jneyra@uab.edu))  
Ravindra L. Mehta, MD, UCSD ([rmehta@ucsd.edu](mailto:rmehta@ucsd.edu))

**OBJECTIVE:** To provide a dynamic resource and platform to develop, test and refine innovations that will accelerate pre-clinical and clinical research. In the pre-clinical area, new analytical approaches in metabolomics as well as functional *in vivo* imaging will be incubated to probe unique biological characteristics of disease development. In the clinical area, tools for federated machine learning using big EHR data will be developed.

**AIMS:**

- Develop an incubator for novel technologies to support pre-clinical research in AKI.
- Develop an incubator for digital workspace technologies to support EHR data analyses in AKI.

## Biomedical Resource Core B: Pre-Clinical Studies of AKI

Co-Directors: Paul W. Sanders, MD, UAB ([psanders@uab.edu](mailto:psanders@uab.edu))  
Volker Vallon, MD, UCSD ([vvallon@ucsd.edu](mailto:vvallon@ucsd.edu))

**OBJECTIVE:** To provide investigators with a resource for animal models, small animal imaging and renal physiology studies relevant to AKI.

**AIMS:**

- **Animal Models Resource** to study murine models of AKI.
  - training in the use of rodent models of AKI
    - ischemia/reperfusion injury
    - sepsis
    - renal transplantation
  - state-of-the-art multi-modality small animal imaging
    - high frequency ultrasonography and microCT
    - gamma-ray imaging (gamma camera, microSPECT/CT)
    - optical imaging (bioluminescence and fluorescence)
- **Renal Physiology Resource** to determine renal physiological changes in AKI.
  - physiology core
    - micropuncture techniques
    - measurements of GFR
    - tubular reabsorption
    - renal hemodynamics (tubuloglomerular feedback, kidney oxygen consumption and nitric oxide in rodents)
    - isolation of primary renal and vascular cells

We established an isolation facility ("Bubble Room") within the UMCF, with the help of funding from the HSF-GEF award mechanism. This allows animals to be received from myriad animal facilities, subject to the procedure, kept in isolation for limited time without contacting other animal facilities, thus limiting any exposure between colonies during procedures.

## Administrative Core

**OBJECTIVE:** To provide logistic, administrative, financial, and scientific oversight

**AIMS:**

- Promote opportunities that attract early-stage and new investigators to AKI research.
- Promote diversity of scientists pursuing AKI-related research.
- Collaborate with the National Coordinating Center and the Consortium to educate the community about AKI research
- Optimize training and educational opportunities in kidney research for medical students through a Summer Student Training Program (SSTP).

## Enrichment

Co-Directors: Lisa M Curtis, PhD, UAB ([lmcurtis@uab.edu](mailto:lmcurtis@uab.edu))  
Joachim H. Ix, MD, UCSD ([joix@ucsd.edu](mailto:joix@ucsd.edu))

**OBJECTIVE:** To promote a future interest in kidney research through the Summer Student Training Program (SSTP)

**AIMS:**

- Engage medical students at UAB and at UCSD
  - 10- to 12-week program
  - Bench and clinical research related to kidney disease.
- Expand research and training support beyond that provided by the U54 Award to offer enrichment activities
