

Sample Portfolio of Teaching, Research, and Service Activities

The Portfolio should comprise separate sections for the candidate's Teaching, Research, and Service activities (samples attached). It should be used to annotate the candidate's CV by providing additional information about activities beyond what is listed in the CV. For example, the impact of a specific discovery, paper, or educational program can be discussed. Each section should be limited to 2 pages, single spaced and 11-point font, and also include as supplements formal evaluations and letters documenting effectiveness in teaching, research and service, as applicable. Teaching portfolios must include a teaching evaluation instrument devised by the department and approved by the Dean(s) or the attached "Teaching Evaluation" form.

Teaching

Superior and effective teaching is a distinct value for consideration of appointment promotion and/or tenure. All faculty are expected to participate in the educational mission of the HSOM in some manner. Student evaluations should be solicited and, where possible, letters of support should also include colleague evaluations of teaching credentials, experience, and scholarly activities.

Specific expectations to be met to achieve Excellence in Teaching include, but are not limited to:

1. Leadership or course master in a divisional, departmental, or HSOM teaching program. This includes the development of a new course or program, or documented improvement of an existing course or program. Formal evaluations are required.
2. Mentoring, including leadership of a dissertation committee, or role as a primary mentor. This should be accompanied by names, dates, and outcome. Testimonial letters from trainees are useful.
3. Leadership in curriculum development at the local or national level, including development of objectives, materials, and methods of evaluation
4. Objective evidence of teaching excellence, such student/resident/fellow evaluations, teaching awards, recognition by faculty, or professional organizations.

The consistent theme for activities that reach Excellence in Teaching is leadership and intellectual input. There are many Teaching activities that are valuable and are expected from a faculty member in an academic medical center, but by themselves do not reach the level of excellence. Examples of activities that are valued, but by themselves do not reach the level of Excellence include:

1. Participation as a course lecturer
 2. Hosting a graduate student on a rotation
 3. Serving as a poster judge in various UAB educational activities
 4. Teaching of students, post-graduate students, or residents in the classroom, laboratory, clinical setting, or other specific area of expertise (this includes continuing education)
 5. Efforts to improve personal teaching skills, with outcome data
 6. Informal student, resident, or fellow advising and counseling
 7. Participation in student, resident, or fellow recruiting.
 8. Serving as a member of education, curriculum, or admissions committees
-

Research & Scholarship

All faculty are expected to engage in scholarly activities to some degree. To that end, scholarly work takes many forms including research and other creative activities. A faculty member's effectiveness can be demonstrated by a continuous track record of extramural funding, original peer reviewed publications and invited presentations at other institutions and at national/international meetings. The quality of an individual's scholarly approach, capacity for independent thought, originality, and products of research is best determined by critical review from one's peers.

Several parameters are considered in determining Excellence in Research. These include, but are not limited to:

1. Demonstration of a sustained, externally funded and independent research program, with continuity over time and becoming more important for the higher-level award (e.g., awarding of Tenure, promotion to Professor). While traditionally the NIH funding was deemed critical, funding obtained from any agency or foundation is recognized.
2. Evidence of research productivity is measured by original publications in peer reviewed journals, books/book chapters, electronic media, and by presenting scientific papers, and exhibits at scholarly meetings. There is no absolute benchmark number of manuscripts that are required for promotion and/or tenure, but it would be expected that a productive faculty member would have ~20 when seeking promotion to Associate Professor, ~35-40 for Professor, with consideration taken for the impact level of the journal, and the position of authorship. Authorship on all manuscripts is valued. However, when authorship is not in the first or last position, it is important to discuss the scientific contribution in the research portfolio. It is appreciated that all authors have important contributions to a scientific manuscript, especially those reporting the findings from large clinical trials and other "team science" efforts.

As applicable, the significance of the faculty member's research should be described, including:

1. Recognition from peer groups, awards, elected to important offices, appointments to consultative committees, being asked to contribute significant sections to textbooks
2. The level of innovation
3. The prospect for future research
4. Benefits to the Department and/or UAB
5. Development of an objective method of evaluation service in a manner that can be quantified and statistically analyzed
6. Editorial consultation or reviews of scientific books and articles
7. Invited presentations of original scientific data at major national or international meetings, or at major institutions or research organizations

Activities that support a strong reputation for the faculty member's scholarship include, but are not limited to:

1. Membership on a national planning committee, NIH study section, and foundation grant reviewer
 2. Editor of a journal or membership of an editorial board
-

Examples of activities that are valued, but by themselves do not reach the level of Excellence include:

1. Membership on editorial boards
2. Ad hoc manuscript reviewer
3. Internal (UAB) grant reviewer
4. Small scale publications, such as case reports, or educational materials.

Service

Service functions are recognized as positive evidence for appointment, promotion and/or award of tenure provided that this service emanates from the special competence of the individual in an assigned field and is an extension of the individual's role as a scholar-teacher. In addition to service at UAB, participation at the level of the Birmingham community and the State of Alabama, as well as in regional, national, or international groups are also valued.

Excellence in Service is achieved by having a leadership role with a strong intellectual component. Such activities include, but are not limited to:

1. Leadership in a professional service organization
2. Leadership in a major UAB educational, clinical, or research committee (local/national)
3. Director/Co-Director of a training program (e.g. graduate or residency program)
4. Director/Co-Director of a research core facility
5. Participation in committee work
6. Fulfillment of significant administrative duties, which should also include positive outcome measures
7. Leadership in community outreach

A typical faculty member will have many service activities that do not rise to the level of excellence but are valued. Participation in such activities falls under the general service category of 'citizenship', which indicates a faculty member's willingness to be a contributor to the overall well-being of the department and/or university.

Examples of activities that are valued, but by themselves do not reach the level of Excellence include, but are not limited to:

1. Contributions to the improvement of student and faculty life
2. Faculty consultation within or outside UAB
3. Organizing department retreats or social events
4. Interviewing faculty candidates and meeting with visiting scientists/clinicians
5. Judging poster sessions at UAB research events

Note: many service activities are related to activities in education and/or research, and can be listed in both

Clinical Service

Excellence in patient care is an integral part of a clinical faculty member's service role and is therefore recognized as a special competence. Excellence in clinical service is judged by several parameters, including but not limited to:

1. Patient volume, as compared to local, regional, and national peers
-

2. Development of a clinical care path or area of specialty. This may be the creation of new area of clinical service, or the expansion and enhancement of an existing clinical service
3. Creating or expanding a unique or highly specialized clinical service
4. Development of new treatments, surgical procedures, or innovative diagnostic techniques, the results of which are disseminated to the professional community by publication or scientific presentation

Note: Many clinical services activities can interconnect with educational and research activities as well.
